

Description of Use Sought

The Restomod Store, LLC provides show quality restoration, customization and modernization services for classic vehicles. This includes body and paint, mechanical and interior work.

Any damaged body or structural components are properly repaired or replaced. Body customization may also be done. MIG or TIG welding may be required. The bodies are smoothed, primed and sanded to prepare for paint. They are then painted, wetsanded and polished to a show quality finish.

The mechanical services provided include motor, transmission and rear end swaps. Suspensions, brakes and fuel systems are also repaired or replaced with modern technology.

Vehicle interiors are restored to original or customized for the customer.

In order to provide these services, we will install 2 (two) four post lifts, a Kayco downdraft paint booth and an air compressor. Industrial sewing machines, welders and a variety of hand tools will be used.

We do NOT provide machine shop work, alignments, tire mounting or sandblasting.

Customer vehicles will be stored indoors. All work will be performed inside.

We request the term of use to be 50 years with the ability to renew at that time.
